

## Vesicoureteral Reflux (VUR)

Urine flows backwards (“refluxes”) back into the ureters and in severe cases it can sometimes travel all of the way up to the kidneys

The higher the “grade” the worse the backup of urine

Grade 1 (some backup) to Grade 5 (lots of backup)

## Reflujo Vesicoureteral (VUR)

La orina fluye de regreso (retrocede) hacia los uréteres y en casos severos puede en ocasiones viajar de nuevo hacia los riñones

A mayor “grado” peor es el reflujo de orina

Grado 1 (un poco de reflujo)  
a Grado 5 (bastante reflujo)
