

Cost Recovery Model For Biostatistics Group

1. Consultation

Initial consultation is provided at no charge to discuss study design, statistical considerations, feasibility assessment, sample size estimation, and potential collaboration opportunities.

2. Grant Proposal Development

Support is available for grant proposal development, including study design, statistical analysis plans, power calculations, and budget preparation.

Investigators are expected to include appropriate biostatistical percent effort in grant budgets when statistical support will be required during the project period.

3. Funded Research Projects

For funded projects, biostatistical support should be provided through percent effort on the grant whenever feasible.

Support may include:

- Study design and protocol development
- Statistical analysis plan development
- Data analysis and interpretation
- Manuscript and abstract preparation
- Database and data management support
- Advanced analytic methods, machine learning, and bioinformatics, as applicable

4. Unfunded, Pilot, and Small Projects

For projects without external funding, support may be provided based on project scope, available resources, and team capacity.

Fee-for-service rates:

- Faculty: **\$150/hour**
- Senior biostatistician: **\$110/hour**
- Biostatistician: **\$85/hour**

Projects requiring substantial effort may be encouraged to identify departmental, divisional, institutional, or external funding mechanisms to support ongoing collaboration.

5. Trainee Projects

Research projects led by fellows, residents, students, and other trainees will be evaluated based on educational value, project scope, and available team resources.

Reduced costs or subsidized support may be available at the discretion of the Biostatistics Group and subject to resource availability.
