

Cancer and Hematology Center

Texas Children's Cancer and Hematology Center provides individualized, family-centered, state-of-the-art medical treatment for children and adolescents with childhood cancer and blood disorders. The nationally acclaimed clinical services are consistently ranked by *U.S. News & World Report* to be among the best children's hospitals for cancer. In addition, Texas Children's Cancer and Hematology Center is internationally renowned for its research initiatives and educational programs.

Our physicians are experts at treating all pediatric cancer and blood disorders, even the rarest. Our world-renowned faculty have pioneered many of the now standard therapies for curing pediatric cancer and blood disorders. Through their research discoveries and translation into the clinic, our physician-scientists have played a major role in transforming the field, positively impacting the outcomes for children around the world. Texas Children's Cancer and Hematology Center faculty are nationally and internationally recognized as visionaries and thought leaders in the field. Their ongoing research initiatives have led to the identification of new targets for cancer therapy and development of new innovative, less toxic therapies for difficult-to-treat cancer and blood disorders. Our team of scientists are also focused on decreasing the morbidity associated the standard therapies to ensure the maximum quality of life, and independence for adult survivors of childhood cancer. Additionally, they focus on understanding and addressing health disparities for our patient population to ensure that all children have readily available access to high quality, state-of-the-art care.

Our treatment focus extends beyond the underlying tumor or blood disorder to address the physical, as well as the emotional, aspects of the disease. This personalized, family-centered care model is key to the treatment of the physical and psychosocial aspects of the disease.
