

Adult Congenital Heart Program

Scan to learn more about our program and conditions we treat or contact us at **832-826-ACHD**.

Texas Children's is leading the way in treating adults with congenital heart disease (ACHD). Supported by the nation's top-ranked children's heart center, our world class-program offers the same exceptional care to adults of all ages.

Our Program

16-bed adult inpatient unit and dedicated adult clinic staffed by adult and pediatric trained experts.

Individualized ACHD care for patients from adolescents through senior adults.

Full complement of specialists from Baylor College of Medicine.

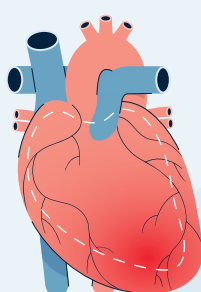

Common Emergency Room Presentations of ACHD

Presence of sternotomy scar along with:

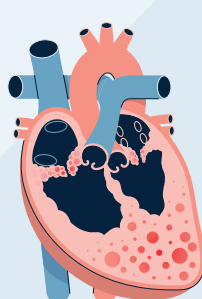

Arrhythmia

Heart Failure

Endocarditis

ACHD BY THE NUMBERS

2.5 million

Adults diagnosed with congenital heart disease in the U.S.

6 per 10,000

ED visits are decompensated ACHD patients

60%

Reduction of mortality rate for patients who are referred to an ACHD center of excellence

66%

ACHD patients visiting an ED will require hospitalization (mortality >3%)

OUR OUTCOMES

1.9%

procedural mortality versus 5% expected mortality using validated ACHD surgical models

1.5%

Overall inpatient mortality between April 2022 and April 2024 (out of 1,269 admissions)
